GREEN CAMPUS POLICY

A Green Campus is a place where a convergence of eco-friendly initiatives and education promotes ecologically sound practises on campus. The green campus concept allows an institution to take the lead in constructing its environmental culture and producing new models by establishing sustainable solutions to the ecological, sociological, and economic requirements of society.

- ✦ Build the institution to be self-sustaining in the fields of energy, water, and sanitation.
- ✦ Participate jointly in the construction of an environmentally sustainable campus and, wherever feasible, spread the notion of an eco-friendly philosophy to the general public and the community.
- ✦ Promote student and employee awareness of environmental issues, such as air and noise pollution.
- ✦ Measure and minimise toxic atmospheric emissions by implementing environmentally conscious practises.

We flourish in the following key aspects as we pursue our agenda of improved environmental concern:

1. Waste Disposal
2. Water conservation
3. Global Warming

As part of the policy, activities relevant to various areas are presented below.

- ★ Waste Disposal
- ★ Improve the volume of vegetation all across the campus
- ★ Adopt waste sorting procedures.

- ★ Take the necessary steps to minimise or recycle plastic waste on campus.
- ★ E-waste should be properly managed, collected, and disposed of.
- ★ Streamline the generation and management of hazardous waste.
- ★ Work to reduce the use of plastic.
- ★ Encourage a paperless workplace, as well as material recycling and reuse.
- ★ Display waste management instructions or alerts in prominent or relevant locations on campus.

Water conservation

The following actions have been taken on campus to cut back on water use:

- ★ Using grey water to flush
- ★ Collecting rainwater
- ★ Change to new taps that are either sensor-based or more water-efficient.
- ★ Watering plants and trees with recycled water.

Global Warming

The following actions are taken to safeguard the environment and lessen the effects of climate change.

- ⊙ Decreasing energy intake and greenhouse gas emissions.
- ⊙ If possible, use sensor-based or energy-efficient lighting in areas like hallways and bathrooms.
- ⊙ Utilizing appliances and air conditioners that use less energy
- ⊙ Condensers, etc., in labs, classrooms, and cafeterias.
- ⊙ Vehicles are not permitted on campus.
- ⊙ Encourage people to use public transportation.
- ⊙ Make people aware of environmental issues, environmental protection, and global warming by holding seminars, debates, and other events.
- ⊙ Encourage various initiatives and experiments as a part of the educational system.
- ⊙ Normal curriculum that touches on environmental issues.

- ⊙ Decrease greenhouse gas emissions by taking action.
- ⊙ To maximise the benefits of the "green brigade" concept with the involvement of the students.

We would like to continue with a programme of continual improvement in our policies and procedures, and we will regularly monitor this policy to ensure that it remains relevant and that compliance is being upheld.
